

**THE GATES AGRICULTURAL  
BELT PROGRAMME**

**2015**

#### **LEGAL DISCLAIMER**

The parts listed in this catalogue (ref. E/20142) are all manufactured by Gates. The use of the original manufacturers' part numbers is for reference purposes only. Gates offers Gates replacement parts for use in the equipment of various manufacturers. The Gates parts offered are not original manufacturers' parts. The belts contained herein are not sponsored, affiliated or otherwise connected in any way with the manufacturers named in this catalogue.

Every effort has been made to ensure the accuracy and comprehensiveness of the information given in this catalogue. However, Gates cannot be held responsible if its products are used in special or exceptional circumstances without prior consultation with and clearance from a Gates representative. If your catalogue is more than 1 year old, please consult a Gates representative to check whether you have the latest version. In addition, you can always download the most recent version of this catalogue from our website at [www.gates.com/europe/agri](http://www.gates.com/europe/agri).

## **GATES AGRICULTURAL BELT PROGRAMME**

Recognising the demands of agricultural machinery, Gates offers you a specially designed Agricultural Belt Programme. This comprehensive range of agricultural replacement belts covers a multitude of applications on combine harvesters and tractors. The programme ensures trouble-free and long-lasting service in the most demanding working conditions of farming machinery. Gates products are built to original equipment quality and offer excellent performance.

### Fit for heavy duty

Gates is a leading manufacturer of high-quality and heavy-duty belts for the automotive, industrial and agricultural markets. Gates belts feature superior performance through the use of state-of-the-art materials and manufacturing processes. Choosing Gates is not just buying belts, but also being assured of the power of an experienced brand name. Gates has a long history of creating new products and materials to meet constantly evolving requirements. Our worldwide customer base stems from our advanced belt technology, product development policy and innovative design procedures.

*As a supplier to leading original equipment manufacturers all over the world, Gates offers an OE equivalent for your belt replacements!*

### Designed for demanding agricultural drives

Agricultural belts work in the heaviest conditions possible. Combine harvesters and tractors work outdoors, often in constant sunlight and therefore hot conditions. The use of relatively small tensioners is common, which implies a significant additional load on the belt in terms of deformation and temperature increase. In addition, the belts are subjected to dust, dirt, stones and other objects that may enter between the belt and the pulley.

For all these reasons, you should only use belts specifically designed for use on agricultural applications, as these are built to specifications capable of withstanding such harsh conditions.

Gates offers the agricultural replacement market a high-quality range of replacement belts for heavy-duty power transmission applications. They are specially developed for heavy-duty drives on farming machinery.

Gates agricultural belts are available as wrapped V-belts with concave sidewalls and Flex Weave® band and as raw-edge, clogged V-belts with special cog design. The belts are all characterised by one or more of the following additional features:

- unique tensile (premium aramid or reinforced polyester) member to maximise performance;
- advanced chemical treatment of the tensile members to assure improved bonding;
- multilayer elastomeric building process, with oriented fibres in the undercord, resulting in a better cord support.

All belts in this catalogue are manufactured in Gates' European facilities, all certified to the highest quality, safety and environmental standards.

*All this ensures your combine harvester or tractor will not suffer from breakdown during the season, as the belts are smooth-running, offer the highest power capacity and a long and trouble-free service life.*

### Gates, more than just belts

Gates produces high-performance hydraulic hoses, couplings, tube fittings, adaptors and self-assembly equipment for original equipment manufacturers and replacement market customers. And Gates hydraulic products work together to give you just one part, or the whole solution to your fluid power needs. You decide.

At Gates, we believe our job is to help you get things done easily and without fuss. So you'll find our portfolio lets you do exactly that. Thanks to the Gates Integrated System Approach you can select, combine and integrate all the hydraulic components you need to keep your operation and equipment running smoothly, safely and reliably. Now and in the future.

Helping you keep costs down, avoiding downtime and loss of production, making things easy to use, speeding up installation, maintenance and repair – these are key parts of our philosophy and they underpin the reasons why people choose Gates.

#### With Gates you can:

##### Find what you need, easily

- › Our product range is deliberately extensive so you can find the item or the solution you need and get it quickly and easily
- › Our products are fully integrated so you can combine them quickly and safely to create hose assemblies and systems for all manner of uses and industrial environments
- › Furthermore, built-in versatility means you can use Gates products with a wide range of complementary products, applications and systems

##### Trust what you use

- › Gates products are the byword for reliability and unrivalled safety. You can be sure our components meet and often exceed all the necessary European and international standards
- › Their ease of assembly and use means you can put them to work quickly and confidently
- › For your more complex situations and environments you can rely on Gates to give you the technical support, advice and expertise you need to find a solution

##### Save money, time and effort

- › You can save money with quality hydraulic equipment from Gates – with hose assemblies that can last up to three times longer than international standards require, giving you the lowest total cost of ownership
- › Our self-assembly machinery and other systems are simple to set up and use, so you can get more done and work more safely
- › Our product innovations can really make a difference and are driven by our philosophy of saving you time, cost and effort

##### Be sure the future is taken care of

- › Gates has a reputation for product development and extending our product lines to match your needs, so you can be sure we can help you now and in the future
- › Our approach to support goes beyond the hardware to the way you use our products too. That's why we run the Gates Safe Hydraulics Programme – a world-class product, safety and preventative maintenance seminar
- › Our application engineering expertise means you get the support and guidance you need, whatever the future brings

***We are always developing innovative products to meet the growing needs of the markets we serve, for agricultural belts as well as for hydraulic products. For more information on our hydraulic portfolio, please refer to our Hydraulic Product Overview Catalogue (E/50080).***

**ONLINE SUPPORT**

## **Gates on the web**

In this ever-changing world of electronic communication and the internet, it has become more important than ever to have the right information available at the right time: quickly and accurately. Gates offers its complete Agricultural Belt programme in an online version. Thanks to this, you will always have all the information you need, right at your fingertips.

### ***E-commerce website***

By going online, registered Gates distributors for agricultural belts can find the most current product information including newest application lists and cross-reference lists, check availability in real time and enter and track orders 24 hours/day. There are 4 possible search criteria: by Gates reference, by OE reference, by manufacturer or by machine.

The e-commerce website is particularly designed for our distributors and is password-protected. Our customer service team will be happy to provide you with your personal user ID and password.

***Check it out at [www.gates-agri.com](http://www.gates-agri.com).***

### ***Website***

Go to [www.gates.com/europe/agri](http://www.gates.com/europe/agri) and use our fast sign-up procedure to find out all there is to know about the Gates Agricultural Belt programme and to consult our list of available literature. You can also request additional information through the online inquiry sheet.

Additionally, distributors may link up with this website thus supplying visitors with updated information on the Gates Agricultural Belt programme.

***Check it out at [www.gates.com/europe/agri](http://www.gates.com/europe/agri).***

### A good maintenance programme

Belt drives regularly require a thorough inspection. Agricultural belts work in the heaviest conditions possible, which implies even more frequent inspections. The potential for long service life is built into every Gates belt. When coupled to a good maintenance programme, your belts and drives will run relatively trouble-free for a long period of time.

By following the advice below, you can maintain a drive efficiently, safely and with very little effort.

#### *Belt installation*

1. After the power has been turned off, isolated (i.e. locked) and the guard removed, unbolt one of the pulleys and move it until the belt is slack, or relax and secure the tensioner. The belt can then be removed without prising. Never prise off a belt!
2. Remove old belts. Check them for unusual wear. Excessive wear may indicate problems with drive design or maintenance procedures.
3. Select correct replacement belt.
4. You can clean belts and pulleys with a rag slightly dampened with a light, non-volatile solvent. Avoid soaking or brushing the solvent on the belt. Do not sand or scrape the belt with a sharp object to remove grease or debris. Belts must be dry before using on a drive.
5. Inspect pulleys for wear and damage. If more than 0.4 mm of wear can be seen, the pulley should be replaced. Make sure the pulleys are properly aligned.
6. Inspect other drive components such as bearings and shafts for alignment, wear, lubrication...
7. Install a new belt or belt set. Replace all belts on multiple belt drives. Do not mix old and new belts. Older belts do not retain tension as well as new belts. If you mix belts, the load may be carried only by the new belts. This can result in premature failure. Also, never mix belts from different manufacturers. Belts with different origins may have different characteristics that can cause the belts to work against each other, resulting in unusual strain and short service life.
8. Take up centre distance on the drive. Rotate the drive by hand for a few revolutions until proper tension is obtained on the tension tester. Some long belts may appear to hang unevenly when installed. It is normal for belts within match tolerances to create noticeable differences in deflection. This "catenary effect" is a curve made by a cord of uniform weight suspended between two points. This appearance will change with proper run-in and tensioning.
9. Secure pulley or tensioner mounting bolts to correct torque.
10. Replace guard and make sure the drive can turn free from external elements.
11. Let the belts run in for a while. This process consists of starting the drive, letting it run under full load, and then stopping, checking and retensioning to recommended values. Running the belts under full load allows them to seat themselves in the grooves. This run-in period will reduce the future need for retensioning.
12. During start-up, look and listen for unusual noise or vibration. It is a good idea to shut down the machine and check the bearings and motor. If they feel hot, the belt tension may be too tight. Or the bearing may be misaligned or improperly lubricated.

## Belt and pulley inspection

Always first read the operating instructions of your machine attentively. Pay special attention to the safety measures that should be taken operating the machine. Always follow the instructions given there.

### Belt inspection

By observing signs of unusual belt wear or damage, you will be able to troubleshoot possible drive problems. Mark a point on the belt, or one of the belts on a multiple V-belt drive. Work your way around the belt(s), checking for cracks, frayed spots, cuts or unusual wear patterns. Check the belt for excessive heat. Belts do warm up while operating, but temperatures must not exceed certain limits. Your hand can tolerate up to about 45°C (113°F); if belts are too hot to touch, troubleshooting may be needed. Belts should be replaced if they show obvious signs of cracking, fraying or unusual wear.

### Pulley inspection

If belts have been removed from the drive, check pulleys for unusual wear or obvious signs of damage. Wear is not always obvious. Use sheave gauges to check V-grooves. Always check pulleys for proper alignment and mounting. Improperly aligned pulleys result in reduced service life.

The main causes of misalignment are:

- pulleys are improperly located on the shafts;
- motor shafts and driven machine shafts are not parallel;
- pulleys are tilted due to improper mounting.

### Forms of misalignment

To check alignment, you will need a straight edge or, for long centre distance drives, heavy string. Line the straight edge or string along a machined face of both pulleys. Misalignment will show up as a gap between the face of the pulley and the straight edge or string. When using this method, make sure the distance between the groove edge and the outer rim of both pulleys is identical. Pulleys can also be checked for tilting with a spirit level.

You can also check misalignment by using Gates' unique laser alignment device, LASER AT-1. The laser line projected onto the targets allows you to quickly ascertain and correct misalignment.

### Belt tension

The final step is to check belt tension, and, if necessary, retension the belt. If too little tension is applied, V-belts may slip. The correct tension is the lowest tension at which the belts will transmit power when the drive is at full load.

The general procedure to check belt tension is as follows:

1. Measure at the centre of the span (t) the force required to deflect the belt on the drive 1 mm per 100 mm span length from its normal position.
2. If the measured force is less than the minimum recommended deflection force, the belts should be tightened.
3. New belts can be tensioned until the deflection force per belt is as close as possible to the maximum recommended

## PREVENTIVE MAINTENANCE INFORMATION

### *After use*

Combine harvesters and tractors should be stored in a dry and covered location, out of the sun, and should be cleaned with water after use. Cleaning with derivatives of oil or other chemicals reduces the useful life of the components. Sunlight, oil, paint, solvents are all natural enemies of rubber products. Don't spray oil on the belts after washing the machine.

### *Stock keeping*

Replacement belts should be stored in a dry location, out of the sun. Make sure not to knick them and not to put any weight on them.

## Troubleshooting guide

When troubleshooting a drive problem, your goal is to identify the cause(s) and then to take appropriate corrective action. The information in this section will help you put your drive back in operation.

|                              | SYMPTOMS                                                                                                           | PROBABLE CAUSE                                                                                     | SOLUTION                                                                                                                                                                     |
|------------------------------|--------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PREMATURE BELT FAILURE       | Broken belt(s)<br>                | 1. Belt rolled or prised onto pulley<br>2. Object falling into drive<br>3. Severe shock load       | 1. Use drive take-up when installing.<br>2. Provide adequate guard or drive protection.<br>3. Redesign to accomodate shock load.                                             |
|                              | Belt fails to carry load (slip) without visible reason                                                             | 1. Damaged tensile member<br>2. ## HOW TO USE THE CATALOGUE

### *Make sure you have the right agricultural replacement belt part number*

#### COMBINE HARVESTERS

In the index on page 23-28, the names of the combine harvester makes and models are presented in alphabetical order. Follow the associated page number references to go directly to the make and model of your interest.

Once you are on the right page, you go to the application in question. There you will find the right Gates replacement belt reference. Additionally, you can check whether the OE reference on your belt matches with the belt you found in the list.

#### Example

- ① If you want a replacement belt for the tresher drive ARBOS 705 A4L combine harvester, you search for ARBOS 705 A4L in the alphabetical listing on page 23.
- ② You go to page 30 of the application listing and look up the Gates reference for the tresher which is 1924209.

|                                                                                                     |                                                                                                                 |
|-----------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
|  Drawing          |  Original equipment reference |
|  Application     |  Gates reference             |
|  Number of belts |  On request                  |

#### TRACTORS

In the index on page 615, all tractor makes are alphabetically listed. Simply find the tractor make in this listing and the corresponding page number will refer you to the page where you will find all necessary details.

Once you have the right page in front of you, you go the tractor model in question and check engine type, year of production, application type and additional information. This will lead you to the right Gates replacement belt reference. Additionally, you can check whether the OE reference on your belt matches with the belt you found in the list.

#### Example

- ① If you want a replacement belt for the generator of your JOHN DEERE 40 tractor, you search for JOHN DEERE in the alphabetical listing on page 615.
- ② You go to page 647 of the application listing and search for JOHN DEERE 40. You check engine type (e.g. 2-CYL. 101), year of production (e.g. 1953), and you will find that the Gates reference for the generator is 0173186.

|                                                                                                        |                                                                                                                           |                                                                                               |
